

Rebecca Pitts, DDS, DMD, DSc, FAACD

SPECIALTY: Cosmetic and General Dentistry. **EDUCATION:** Doctor of Science (DSc) in Advanced Restorative Dentistry and DMD from Boston University. **AWARDS/HONORS:** Achieving the “Accredited Fellow” status, the highest designation from the American Academy of Cosmetic Dentistry (AACD). To receive this honor, cosmetic dentists must illustrate the greatest level of clinical excellence and skills through a large number of their actual clinical cases. They must also demonstrate profound knowledge through stringent written and oral examinations. In 25 years, since the founding of the organization and out of thousands of candidates, only 50 dentists worldwide have achieved this prestigious distinction. Furthermore, Dr. Pitts is one of only two dentists who are also AACD-Accredited Laboratory Technicians. **GREATEST PROFESSIONAL ACHIEVEMENT:** Receiving the DSc degree, the dental equivalent of the PhD., in the areas of fixed-prosthodontics, advanced restorative, high-tech and cosmetic dentistry. After earning a DMD or DDS degree, a dentist must complete an additional five-year full-time graduate program to be considered for this designation. **INNOVATIONS:** New techniques to maximize esthetic and conservation of the

tooth structure in procedures such as porcelain veneers; cutting-edge materials and CAD/CAM technology; various teeth whitening regimens, including the latest techniques for recalcitrant discolorations; teeth straightening without braces using Invisalign invisible aligners and other approaches; sedation for anxious patients. **WHAT SETS HER APART:** Dr. Pitts is the dentists’ dentist—many colleagues see her for their own dentistry. Her practice has an in-house lab, and she fabricates many of her own porcelain veneers and crowns for various cosmetic and reconstructive cases. **CHAIRSIDE MANNER:** “Every patient is very special to us. They are our friends and family. Our caring and competent dental team strives to provide the best professional care while making the experience as pleasant and comfortable as possible for our patients.”
