Notes:

1. PEX tubing sizes are denoted by CTS (copper tubing size), not OD (Outside Diameter) or ID (Inside Diameter).
2. OD of PEX, copper and CPVC pipe with the same size (CTS) is the same. This is why push fittings can be used with all of these pipes.
3. PEX made to US standards must comply with a SDR-9 (Standard Dimension Ratio), which is the ratio of OD (Outside Diameter) to pipe wall thickness (9:1). Exceptions are nominal sizes 1/2" and below.

MolyArmor 350 Corrosion Inhibitor

MolyArmor 350 Corrosion Inhibitor (boiler treatment) provides excellent water jacket corrosion protection when properly maintained at a minimum of 350 ppm. It is easy to test for maintenance levels with a test kit (p/n 2500598). One gallon of MolyArmor 350 Corrosion Inhibitor treats 200 gallons of system water.

Models	Initial MolyArmor 350 Amount

Sludge Conditioner

Reduces mineral deposits in boiler side of water-to-water heat exchangers. Can be used as a preventative when filling the furnace or as a rescue treatment if corrosion occurs in the water jacket due to improperly maintained Corrosion Inhibitor levels.

Refer to following chart for the amount to use for each model furnace for preventative or rescue treatment applications. Note that 1 unit = 1 gallon.

PREVENTATIVE IN HARD WATER: While it is best to use softened water when filling the furnace, Sludge Conditioner should be used if the water quality is known to contain higher concentrations of minerals or solids.

RESCUE TREATMENT FOR CORROSION: If a furnace has been subjected to low Corrosion Inhibitor levels and corrosion is evident in the water jacket, Sludge Conditioner can be used by circulating through the furnace for one week to help clean some of the corrosion from inside the water jacket before flushing and refilling.

Models	Preventative Amount	Rescue Amount
Maxim M255 PE; 3300, 4400		
CleanFire 300	1/2 unit	1 units
CleanFire 500, 700; 5500	1 unit	2 units
